                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human leukocyte antigen; immune system; immunosuppression; antibody; major histocompatibility complex; antirheumatic; antiarrhritic; neuroprotective; antiinflammatory; antidiabetic; antipsoriatic; immunosuppressive; dermatological; antithyroid, nephrotropic; psoriasis; thyromimetic; hepatotropic; immune response suppressor; narcolepsy; rheumatoid arthritis; juvenile arthritis; multiple sclerosis; insulitis; crave's disease; insulin-dependent diabetes; Hashimoto's disease; systemic lupus erythematosus; ankylosing spondylitis; myasthenia gravis; transplant rejection; graft versus host disease; pemphigus vulgaris; glomerulonephritis; thyroiditis; pancreatitis; primary biliary cirrhosis; transplant production; careful transplant production; careful transplant production; careful transplant production; careful transplant production; careful transplant production; careful transplant primary biliary cirrhosis;
                                                                                                                       Composition for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen
                                                                                                                                                                                                                                                                                                                            12-MAY-2000; 2000EP-0110063.
06-OCT-2000; 2000US-238762P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cell, immunosuppressing a patient and for killing a cell expressing a antigen, HIA-DR on the surface of the cell, where neither cytotoxic entities nor immunological mechanisms are needed to cause or lead to the killing. The killing is dependent on the action of non-caspase proteases and/or cannot be inhibited by zVAD-fmk or zDEVD-fmk. The present sequence is a complementarity determining region (CDR) based on the human antigen binding polypeptides of the invention MS-GPC-1, and 10. The CDRs are either the native sequence or have been optimised/mutated to alter their antigen binding capabilities.
                                                                                                                                                                                                     WPI; 2002-075289/10
                                                                                                                                                                                                                                     Nagy Z,
                                                                                                                                                                                                                                                                                                                                                                                     14-MAY-2001; 2001WO-US15626

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the IC50 for the suppression of immune response and the IC50 for the suppression of immune response is 1 microM or less. (I) has antirheumatic, antiarthritic, neuroprotective, antiinflammatory, antidiabetic, antipsoriatic, immunosuppressive, dermatological, antithyroid, nephrotropic, thyronimetic and hepatotropic activities, and can be used as a suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system with another cell, immunosuppressing apatient and for immune system with another cell, immunosuppressing a patient and for virtues of all expressing a patient and for the cell and cell as a patient and for the cell and cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell as a cell a

HLA-DR-specific protein VL-CDR1-Sequence MS-GPC-6

```
CC can be used as suppressor of immune response. (1) is useful for csuppressing activation or proliferation of a cell of the immune system, cc suppressing II-2 secretion by a cell, the interaction of a cell of the immune system, cc suppressing II-2 secretion by a cell, the interaction of a cell of the cc immune system with another cell, immunosuppressing a patient and for c killing a cell expressing an antigen, human leukocyte antigen (HLA)-DR con the surface of the cell, where neither cytotoxic entities nor cc immunological mechanisms are needed to cause or lead to the killing. (I) (optionally linked to cytotoxic or immunogenic agent) is useful for creparing a pharmaceutical preparation for the treatment of rheumatoid carthritis, juvenile arthritis, multiple sclerosis, Grave's disease, cinsulin-dependent diabetes, narcolepsy, psoriats, Grave's disease, creythematosus, ankylosing spondylitis, transplant rejection, graft versus continues, hashimoto's disease, myasthenia gravis, pemphigus vulgaris, clivensis, irritable bowel disease and Sjogren's syndrome in humans. CC disposis, irritable bowel disease and Sjogren's syndrome in humans. CC chab2446 to ABA92474 and ABBS7457 to ABBS7590 represent sequence used in cc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polynucleotides encoding different immunoglobulin binding protein (IgBB) polypeptides ct that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an IgBP that comparing an IgBP array in plant cells are selected, and preparing an IgBP array in plant cells. At least one peptide sequence has comparing an IgBP array in plant cells are more comparing an IgBP array in plant cells. At least one peptide sequence has comparing an IgBP array in plant cells are munoglobulin molecule. IgM, IgG, IgA, IgD, IgE, IgY, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein carray, preferably heavy chain binding protein (CHBP) array in eukaryotic cells (e.g. Agrobacterium tumefaciens or maize) or other eukaryotic cells (e.g. Agrobacterium tumefaciens or maize) cor other eukaryotic cells (e.g. Magrobacterium tumefaciens or maize) cor other eukaryotic cells (e.g. Screening assays of IgBPs having immunoglobulin derived peptide that may be incorporated into an IgBP of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    즟즟

CC neurite outgrowth, regeneration, remyelination and neuroprotection in C central nervous system (CNS). (1) is capable of inducing remyelination, CC promoting cellular proliferation of glial cells, and promoting Ca2+ CC signaling with oligodendrocytes. An humanised antibody to (1) can be celled from antibody sHIGM22 (LYM 22), ebvHigM MSI19D10, ebv HIGM CC DESD68, AKJR4, CB21E12, CB21E17 or MSI19E5. (1) is useful for stimulating CC RNS axons, or treating demyelinating proliferation of glial cells in CC CNS axons, or treating demyelinating proliferation of glial cells in CC CNS axons, or treating demyelinating disease of CNS in a mammal in need of such therapy. (1) is capable of binding to structures and cells within CC of a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMEV) or for treating a human being having multiple sclerosis, or a common or domestic animal with a viral demyelinating disease, or a post-curval disease of CNS. (1) is also useful for stimulating remyelination of CNS axons. The continuation in a subject Methods where (1) is administered to a patient condition in a subject Methods where (1) is administered to a patient causeful for treating multiple sclerosis, Parkinson's disease, CNS disease, and other conditions in the CNS where nerves are damaged as by trauma. The present sequence represents conditions in the CNS where nerves are damaged as by trauma. The present sequence represents

                                                                                                     Blue cells were transformed with the library. Filamentous phage were produced which expressed the MAb regions on their surface. Panning with gp120 and gp41 resulted in the recovery of immunoreactive clones. The light chain VK region sequence AAR54314 is from a gp120-
                                                                     Sequence
                                                                                                                                                  Lymphocyte mRNA was converted to cDNA and subjected to PCR amplification using primers specific for heavy and light chain variable regions. The amplification products were inserted into a dicistronic vector to produce a library of fragments. E.coli XL1

                                                                                                              The sequences given in AAW01261-92 represent the light chain variable regions (VL) of a series of monoclonal antibodies (MAb's) which are immunoreactive with HIV glycoprotein gp120 and are capable of neutralising HIV. This sequence represents the sequence of the JK2 gene clone, s5. A MAb containing this VL sequence has the capacity to reduce HIV infectivity titre in an in vivo virus infectivity assay by 50 % at a concentration of less than 700 ng of antibody/ml, and binds mature gp120 preferentially over the precursor gp160. The MAb may be used for determining immunocompetence of a human anti-HIV antibody and in the detection of HIV infection.
                                                                                          Sequence
                                                                                                                                                                                                                                          Example; Fig 11; 366pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ₹ ₹
                                                                                                                                                                        field isolates and provide useful information regarding the immunocompetence of an immune response in HIV infected patients. The monoclonal antibodies are useful for producing anti-idiotypic antibodies which can be used to screen human monoclonal antibodies to identify whether the antibody has the same binding specificity as the antibodies of the invention. The neutralising antibodies define new epitopes on the HIV gpl20 and gp41 glycoproteins, thus increasing the availability of new immunotherapeutic human monoclonal antibodies. A major advantages of the monoclonal antibodies of the the thuman polynucleotides sequence. Thus in vivo use of the monoclonal antibodies for diagnosis and immunotherapy of HIV induced disease greatly refuses the monoclonal
Sequence
                         reduces the problems of significant host immune response to the passively administered antibodies which is a problem commonly encountered when monoclonal antibodies of xenogeneic or chimeric derivation are utilized. An additional major advantage of the monoclonal antibodies described derives from the fact that they immunoreact with a unique determinant present on mature HIV glycoprotein gp120. This class of antibodies is particularly effective at neutralising field isolates of HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                            mature glycoprotein gp120 preferentially over HIV precursor glycoprotein gp160 and neutralises HIV and which reduces HIV infectivity titre in an in vitro virus infectivity assay by 50%, at a concentration of less than 700 ng/ml. The antibodies are used as reagents for the diagnosis and immunotherapy of HIV induced disease. They are useful as neutralising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunodeficiency virus type 1 (HIV-1) antibody. The invention relates the human whole immunoglobulin (Ig) molecule which immunoreacts with HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 9; Figure 11; 366pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Anti-human immunodeficiency virus type 1 antibody; HIV-1; neutralise; reduce HIV infection; diagnosis; immunotherapy; HIV induced disease; glycoprotein 120; gp120; glycoprotein 41; gp41; monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a fragment of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel human monoclonal antibodies which immunoreact with and neutralise human immunodeficiency virus useful for treating.HIV infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Burton

A,

ភិទិសិសិសិសិសិសិសិសិសិសិសិសិសិសិសិសិ immunoglobulin amino acid sequences from the host cell. The anti-HIV gp-120 monoclonal antibody is used for providing passive immunotherapy to HIV in a human. They can be administered to high-risk patients to reduce the likelihood and/or severity of HIV-induced disease and to patients who are already HIV-infected. The antibodies are used for neutralising field isolates which provides information about the immunocompetence of an immune response in HIV patients, for detecting HIV in a biological fluid or tissue sample e.g. by radioimmunossay, for producing anti-idiotypic antibodies which can be used for active immunisation and to screen human monoclonal antibodies to identify those This sequence represents a fragment of the antibodies of the invention. The invention relates to the production of an anti-HIV (human immunodeficiency virus) glycoprotein (gp)-120 monoclonal antibody capable of reducing an HIV infectivity titre in an in vitro virus infectivity assay by 50% at a concentration of less than 70 ng/ml. The method for the production of the antibody comprises:

(a) providing a first polynucleotide encoding a heavy chain immunoglobulin amino acid sequence (which does not comprise the sequence represented by AN99206) and a second polynucleotide encoding a light chain immunoglobulin amino acid sequence;

(b) inserting the first and second polynucleotide sequences into a host call Human neutralizing monoclonal antibodies to human immunodeficiency virus (HIV) used for providing passive immunotherapy to HIV are specific for glycoprotein-120 with the same binding specificity and to monitor the course of HIV disease therapy by measuring the changes in concentration of HIV present in the body or in body fluids by immunoassay. The anti-HIV gp-120 monoclonal antibodies are encoded by a human polynucleotide sequence and when used in vivo for diagnosis and immunotherapy of HIV-induced disease reduce the problems of significant host immune response to the antibodies associated with monoclonal antibodies of xenogeneic or cell; and Example 9; Figure 11; 374pp; English WPI; 2000-246867/22 Burton DR, 16-SEP-1999; 16-SEP-1999; AU9948754-A. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
